COMMIT

Git . . . with BUTTONS !

Pitch deck · cocommit.vercel.app · Oct 16, 2026

Chat app

Where decisions get made

GitHub repo

Where the code lives

Terminal

Only one teammate understands it

Every time someone asks: "Did you push yet?"

Problem 1 · Git scares beginners

36 M

In 2025 , new developers joined GitHub in one year. More than one every second.

New developers are arriving fast, and the tool is hard to start with.

Source: GitHub Octoverse 2025

Problem 1 · The tool is the barrier

Before training

67%

felt unable to use Git and GitHub for projects

After training

9%

still felt unable

University course, 258 students over three terms (224 and 200 survey responses). Bilkent University, Turkey.

Source: Jabrayilzade et al., 2022 (HICSS)

Problem 2 · Team knowledge is scattered

Finding information is now the top time-waster for developers. Technical debt fell out of the top five.

1
Finding information

2
Adapting to new technology

3
Switching between tools

Source: Atlassian, State of Developer Experience 2025 (3,500 developers and managers, six countries)

Problem 3 · Developers keep searching for the same answers

61%

of developers spend 30+ minutes a day searching for answers

3 in 4

answer questions they have already answered before

Sources: Stack Overflow Developer Survey 2024 (61%); Stack Overflow, 2024 survey insights (3 in 4)

Problem 4 · Everyone uses AI, but each AI knows something different

84%
use or plan to use AI tools

46%
don't trust its accuracy, up from 31%

66%
top frustration: answers almost right, but not quite

Our view is your AI doesn't know what your team already agreed on.

Sources: Stack Overflow Developer Survey 2025; GitHub Octoverse 2025 (~80% of new developers use Copilot in week one)

The solution

Git without the terminal.

Your repo

Team chat

Shared AI context

GitHub stores what changed. CoCommit stores why.

5 steps and then ready to go

1

Sign in

Log in with GitHub and pick a repo. You install nothing.

2

Commit

Pick files, write one line, press Commit, Push, Open PR.

3

Plain errors

"main has 2 new commits. Get the latest first."

4

Pin decisions

Merges show in chat. Pin as decision saves to DECISIONS.md.

5

Ask any AI

"What are we using for chat?" It answers: Supabase.

cocommit.vercel.app · Backup: screen recording of the demo

Why it matters

First commit in three steps

Every action is a button with a plain name.

No more re-explaining to AI

Every AI starts from the team's own decisions.

Normal Git underneath

The terminal still works. It doesn't replace GitHub.

Not tied to one AI tool

The shared context is plain Markdown. Any AI tool can read it.

Impact we aim for, and how we'll measure it

Time to first commit: 3 clicks

We time real first-time users.

Fewer repeated questions

We count "did you push?" and "what did we decide?" before and after.

Better AI answers

Same questions, with and without the COCOMMIT context.

Who benefits first

Student teams, hackathon teams and coding clubs.

These are the team's goals, not sourced statistics.

Future plan · with three phases

Now · hackathon MVP

Button-based Git, team chat, pin-to-repo decisions, shared COCOMMIT context.

Next 3 months

Tasks linked to commits, file sharing and voice calls (already on their own branches). Pilot with student teams and coding clubs in Thailand.

Within 1 year

AI that drafts the context from chat into decisions and the log. Teacher dashboard to see each team's progress.

Business plan · freemium

Free

Students and small teams, so it spreads through schools and hackathons.

Team plan

Startups and small companies. AI context drafting, longer history, more storage. Per user per month.

Education plan

Universities and bootcamps. Classroom setup and teacher dashboard.

Low costs: code stays on GitHub and context is files in the repo. Main cost is AI, which sits in paid plans. Go-to-market: hackathons, university coding clubs, instructor partnerships.

Pricing is a starting proposal that we will test in the pilot.

Your whole team, and every teammate's AI, working from the same understanding.

Thank you · cocommit.vercel.app
